

Heatseeker Premium

Premium Solar.
Built to Perform.

Designed for greater solar capture.
Made for Australian conditions.

Heatseeker Premium combines a 10-tube collector design with Supreme Heating's exclusive elliptical profile to deliver greater roof coverage, increased solar exposure and reliable heating performance.

Engineered for Australian conditions, its low-profile construction, increased wall thickness and full-length manifold system provide the durability, flexibility and clean finish installers expect, while giving pool owners an efficient way to extend their swimming season using free energy from the sun.

- 10 tube collector
- 30% more sun exposure with elliptical profile
- Blends with roofline
- Leak resistant
- Custom lengths available
- 6m full length manifold

SUPREME
HEATING
POOL HEATING SINCE 1990

Exclusive by design. Built for better solar performance.

Heatseeker Premium is engineered around Supreme Heating's exclusive elliptical collector profile, designed to increase solar exposure while maintaining a clean, low-profile roof finish.

Combined with its 10-tube construction, increased wall thickness and full-length manifold system, it delivers the strength, flexibility and reliability demanded by Australian installations.

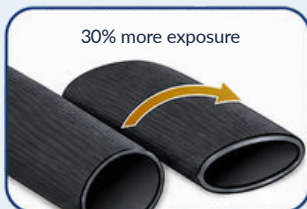

10 Tube Manifold System

- ✓ No PVC Joints
- ✓ 6m full length manifold

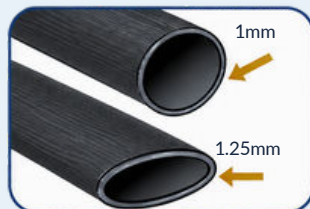

Exclusive Elliptical Design

- ✓ 30% More Sun Exposure
- ✓ Greater Solar Heat Capture

Round vs Elliptical

Elliptical tubing provides up to 30% more sun exposure than traditional round tubing.

Thicker Wall

Increased wall thickness provides greater strength and durability in harsh Australian conditions.

Low Profile

Closely spaced tubes minimise shading while maintaining a clean, streamlined roof profile.

Less Debris

Low-profile tubing reduces debris build-up, helping maintain consistent solar exposure and performance.
